Web monitoring program

ACE-WMP
Web monitoring program

ACE INSTRUMENT CO., LTD.
www.aceinstrument.com

Functions

- File upload
  It is composed file upload program and management program. Measured data by data logger are being uploaded by file upload program to server computer.
- Site management & Site selection
  Sets all the needed conditions such as data logger, measuring sensor, upload time for instrumentation management.
- User management
  Set the connection administrator account.
- Management limit
  It can be sent an SMS & issued warning by setting management limit
- List of measurement sensor
  It is easy to select sensors because it is arranged as tree type such as site/section/cross section/measurement sensor on left side of program.
- Check measurement data
  It is displayed converted engineering unit's data and graph by setting period of sensor's measurement data.
- Save data
 It is possible to use the data as user's report format because the data record be saved as EXCEL file (csv).

Description

Web monitoring program is for sharing the information and for supporting the prompt decision-making with the person concerned under construction at a site.
The measured data is saved to the server computer by internet network. It is program that drawing up the measuring report, making a graph of engineering unit, giving an alarm, and lookup of a real-time measuring data are possible on the basis of the saved data.

Web monitoring program can draw up the report using all computers that web browser are installed at the remote place, so you can work quickly and efficiently.

Ordering information

Web monitoring program is that we developed for information construct at the company of civil and building construction, or engineering company of design, supervision, and measuring.
It is a rental service for automatic measure using the web monitoring program as rental type by the month period without the construction cost of the system or the server computer.

And we carry out the OEM development service as inexpensive cost depending on the customer's requesting spec and project condition.

Features

- Searchable real-time measuring data system
- Multilateral way of contacting the server by internet network simultaneously.
- Grant access account at each of sites
- A variety of available data logger such as ARF-100, ADL-200
- Establishment of standard for management control
- Send an SMS & issue warning
